FINTECC grants offered to clients are part of the EBRD business development process and subject to the eligibility criteria and the level of advancement of the technology. To access an incentive grant, a company will approach the EBRD with a specific investment plan and financing request, which the EBRD will review and provide the terms of a potential financing. The EBRD will then complete a screening of all energy, water and materials efficiency opportunities relating to the proposed investment plan and the company’s operations. The Bank can also arrange a donor-funded technical audit, if required.

The EBRD then seeks approval of the financing. If the investment plan features eligible technologies, an incentive grant will be approved as part of the process. The client company may then implement the investment plan, including the eligible climate technologies. Lastly, once evidence of successful implementation has been provided, the EBRD reimburses the company, using the incentive grant.

Actions: Successfully access an incentive grant.

Actors: EBRD; Client company

2 Create enabling environments for climate technology projects

FINTECC offers assistance in the form of policy support and market insights.

**Policy support** is aimed at implementing legislative and regulatory reforms, with a focus on energy efficiency and renewable energy policies that lead to deployment of the best available climate technologies and equipment.

**FINTECC Insights** provide information, data and research on climate technology markets and policy. Documents have been created by the EBRD, in collaboration with our partner organisations and consultants.

Actions: Create an enabling environment to receive future financial and/or technical support.
